# The Network for Education and Careers

edChain

edChain is one of the first distributed network for learning and careers that utilizes blockchain and decentralized web technologies.

The team has run Byte Academy since 2014, a technology school known for its FinTech and blockchain programs. Managing multiple campuses and communities around the world, the team realized the need for an universal library of educational content in order to effectively deliver outcomes-based education.

Using the power of blockchain technology and its smart contract-based payment platform, edChain enables students, educators, employers and institutions to interact directly and participate in the exchange of education and learning, without the involvement of intermediaries. This makes quality education more accessible and affordable to a broad audience.
